

Coritec Roofing Information

Coritec is an extremely durable bitumen and fibre roofing sheet which will outperform a traditional felt roof material and is backed by a 5-year guarantee.

Our Coritec roofing is black in colour, comes as standard on our Heavy Duty and Heavy Duty XTRA sheds and is available as an upgrade on almost all of our other sheds and summerhouses.

Coritec is a great roofing option which has the following benefits:

- **Rust and rot free**
- **Durable & long lasting**
- **Great thermal values**
- **Noise reduction properties**
- **5-year guarantee**

The undulated, or ridged, profile of the sheets provides better drainage and water run off for the roof of the building and enables better air circulation around the roof area.

The Coritec sheets are fitted on top of the tongue and groove roof panels meaning that the inside of the building still looks attractive with its natural timber finish. Apex roof ridges are finished with powder coated steel ridge piece(s) for optimum performance, whilst Pent roof lines are protected on the front and two sides by a 90-degree plastic trim which sits neatly behind the timber fascia boards.

Coritec requires minimal ongoing maintenance, we recommend blowing or brushing leaf debris from the roof periodically. Whilst the roof material is strong enough to stand on, we do not recommend climbing on the roof to carry out maintenance. Always consult a professional if working at height is required.

CORI-TEC ROOFING

- ✓ RUST & ROT FREE
- ✓ DURABLE & LONG LASTING
- ✓ GREAT THERMAL VALUES
- ✓ UPGRADE ANY BUILDING
